Viewing Patient PK Parameters

How do I view my patient's pharmacokinetic parameters?

Written by Mike Ferrelli

Updated over a week ago

After entering in your [historical doses and lab results](#), some individuals want to view the patient's pharmacokinetic parameters like terminal half-life, clearance, and volume of distribution. DoseMeRx has the capability to view all of your patient's estimated pharmacokinetic parameters!

To view your patient's estimated pharmacokinetic parameters, select the 'PK Parameters' tab. This will display all of your patient's pharmacokinetic parameters including, the volume of distribution, the estimated clearance, the elimination rate, and the terminal half-life.

[Historical Plot](#) [Doses](#) [Lab Results](#) [Course-Specific Data](#) **[PK Parameters](#)** [Past DoseMeRx Reports](#) [Patient Information](#) [Drug Information](#)

PK Parameters Overview

Parameter	Value	Value / kg
Vd	54.29 L	0.68 L/kg
CL	4.06 L/h	0.05 L/h/kg
K _{elimination}	0.0747 /h	—
Terminal T _{1/2} ⓘ	9.27 h	—

ⓘ Using dosing weight of 80.00 kg (TBW).

Tip: When you create your patient's dose report, the patient's individual pharmacokinetic parameters will be displayed on the dose report along with the population pharmacokinetic

parameters.
